Power Pages Pay-as-you-go Setup

Ascentis Consultant Database portal · Moving from Trial to Production

Before you start

- An Azure subscription with a payment method (here: **AS_AIPPL_PowerApps**).
- Power Platform admin rights (Power Platform Administrator or Global Administrator).
- Owner or Contributor role on the Azure subscription.
- A **Production**-type environment. A Trial environment cannot be linked.

Step 1: Create the billing plan

1. Open **admin.powerplatform.microsoft.com**.
2. Go to **Billing** → **Billing plans** → **New billing plan**.
3. Name: **AscentisPowerPagePAYG**.
4. Azure subscription: **AS_AIPPL_PowerApps**.
5. Resource group: **AIPPL_PowerPages**.
6. Meters: tick **Power Pages** and **Dataverse**.
7. Also tick **Power Automate** if the confidentiality flow runs in the same environment without its own licence.
8. Click **Next**.

Step 2: Link the environment

1. On the next screen, select the Production environment.
2. Review and create the plan.
3. To add more environments later: **Billing plans** → **open the plan** → **Add environments**.

Step 3: Convert the site to production

1. Open **make.powerpages.microsoft.com** → **Sites**.
2. Open the site's **…** menu and choose **Convert to production** (or use the banner on the trial site).
3. Choose pay-as-you-go as the billing method when asked.

> The trial site showed "expires in 0 day(s)". Convert it as soon as possible to avoid suspension.

Step 4: Verify

- Admin center → **Resources** → **Power Pages sites**: the site type shows **Production**.
- Azure → **Cost Management**: confirm usage is appearing, and add a budget alert.

Step 5: Portal go-live checklist

- Deploy the portal to the Production environment with `pac pages upload` using that environment's URL.
- Register the confidentiality flow in the Production environment.
- Check site settings, sign-in provider and table permissions.
- Confirm preview mode is off on the live site.
- Add a custom domain and SSL certificate if required.
- Update PROJECT_MEMORY.md with the deployment status.

Costs

Item	Billing
Authenticated users	Per user per month
Anonymous users	Per user per month
Dataverse storage	Billed separately (Dataverse meter)

> Check current rates on the Microsoft Power Pages pricing page.

Troubleshooting

- **Subscription not listed:** it must be in the same tenant, and the **Microsoft.PowerPlatform** resource provider must be registered (Azure → Subscriptions → Resource providers).
- **Environment not selectable:** it is probably a Trial or Developer type. Use a Production environment.
